SG Corp HR Portal

CR – 002
HR Separate Access to Job Application

Summary:

The HR department doesn't have the funding at this time to invest in a fully secured web solution, so they would like to create a unique link that they can give out for external candidates to submit their job applications. This link should take them to a page that allows them to submit the form and presents them with a confirmation page, but has no links to the other parts of the site.

Requirements:

1. We need to be able to give potential applicants a link to the Submit Job Application page. Add a route configuration to have a url that looks something like: <localhost:port>/apply
   This should load the page we previously created but without the menu options along the top that we see in the rest of the portal.
