ADO.Net Presentation

Prepare a Demo and Presentation on ADO.Net

In software development, technologies evolve and new ones are introduced frequently. In the workplace we as developers are often tasked with investigating these technologies, learning their benefits and how to use them, and presenting these to our peers. This is done to evaluate their usefulness in our current organization, or for the purpose training our peers on a technology that is being adopted.

In this assignment, we are preparing you for this by having each team work together to develop a presentation on ADO.Net. You can use the slide deck found in Moodle for this week called Intro to ADO.Net. You can also use the following two sample projects (which go along with the slide deck) in the GitHub Materials Repository:

DataReaderExample
DataReaderToClassExample

You should also search on-line for additional resources to help you.

Key components:
- Each presentation should be no more than 10 minutes long.
- You should talk about the benefits and key features of the technology.
- You should prepare a quick demo (Console or MVC app) that shows how to use it.
  - This should be a working demo that you can shows the results.
  - You will need to discuss how the demo app works.

Utilize your instructors if you need additional help! Be Creative and Have Fun with this!
