Blog Site/CMS Requirements

Final Capstone Project

Content Management System

I'm a small company owner that wants to blog to the world to help generate publicity. My needs are small:

- Give me a way to display my blog posts to everyone who comes to my site
- Give me a way to enter my blog posts so that only I can add them.

Now, I don't want to have to write HTML in my blog posts. Could you hook me up with a way to write my posts in an editor like Word? I hear there's something called TinyMCE. Can you hook me up?

What would be nice… I need to categorize my blog posts. And since this is a #hashtag #crazy #world, I probably should have some way to tag my posts with multiple tags as well.

Now I need a way to add static pages. Again, I want the world to view the pages, but only I can write these pages. Remember, I don't like writing straight HTML at the end of the day, so if you can hook me up with an editor that lets me write rich text and post images, that would be awesome. This is a sample of my static pages:

Disclaimer

These are my own personal thoughts, beliefs, and perspectives of the world. This is not representative of any employers, planning committees, clients, or any other associations tied with me or my name. Every person has an opinion on something, and these are mine. We may end up having to agree to disagree, and I can guarantee you that not everyone will feel the way that I do.

I may post happy things or sad things, run-of-the-mill things or controversial things. Whatever I post is most likely posted straight out of my mind, as I write stream-of-conscious style.

If you have any questions for me personally, please feel free to email me at my first name at this domain.

~ Sarah "sadukie" Dutkiewicz

I am hiring someone to handle my marketing and blog posts. So I need the ability to let them post as well. But I want to be able to approve their posts when they're made.

Added bonus: If you have time, can you give me the ability to schedule my posts and also make them expire on their own? For example, I may make a post talking about my monthly specials, and I wouldn't want that post to show up after that month. Maybe give me a way to set an expiration date that then prevents the post from being shown after that date.
